Semester-IV
DSC-MAT-402: Elementary course in mechanics: Statics and Dynamics

Credits = 4 (L = 3, P = 1)
One credit would mean either a lecture (L) of 1 hour/week or a practical (P)of 3 hours/week. So, 4 credits would correspond to 3 hours of lectures and 3 hours of practicals per week. Total Contact hours in a semester of 15 weeks will be 90 hrs. (45 hrs. lectures + 45 hrs. practicals)

Exam Time: 3 hours **Max. Marks: 100**

(90 External + 10 internal assessment)

Note. 1. The syllabus is divided into four Units. The examiner will set in total nine questions including a compulsory question. The compulsoryquestion (Question No.1) will contain 6 parts covering the entire syllabus. Two questions willbe set from each Unit.
2. A student will be required to attempt five questions in all, selecting one question from each Unit and the compulsory question. Each question will carry equal marks.

Objective: The goal of this course is to study elementary mechanics, motion of a body under constant as well as variable acceleration, work, power, energy etc. Study the equilibrium of a body underthe effect of concurrent as well as parallel forces, laws of friction, problems on ladders, rods, spheres and circles etc.

Learning Outcomes: After completing this course students will be able to handle problems in mechanics.Students will be able to compute an equation of a trajectory of a projectile, its time of flight, horizontal range etc. Students will be able to check whether the number of coplanar forces acting on a rigid body is in equilibrium or not.

Unit-I

Motion of a particle with constant acceleration, acceleration of falling bodies, motion under gravity, motion ofa body projected vertically upwards: Newton's laws of motion, motion of two particles connected by a string, motion along a smooth inclined plane, constrained motion along a smooth inclined plane.
Variable acceleration: Simple harmonic motion, elastic string.

Unit-II

Curvilinear motion of a particle in a plane: Definition of velocity and acceleration, projectiles, motion in acircle.
Work, power, conservative fields and the potential energy, work done against gravity, potential energy of agravitational field.
Relative motion, relative displacement, velocity and acceleration, motion relative to a rotating frame ofreference.

Unit-III

Parallelogram law of forces, Components of a force in given directions, resolved parts of a force, resultant of any number of coplanar concurrent forces, Equilibrium conditions for coplanar concurrent forces.
Equilibrium of a body resting on a smooth inclined plane.Equilibrium of three forces acting at a point – Triangle law of forces, Lami's theorem.Moment of a force about a point and a line.

Unit-IV

Parallel Forces, Centre of Parallel forces, Couples and their equivalence, Varignon's theorem. Resultant of a force and a couple, resolution of a force into a force and a couple, reduction of a system of coplanar forces to a force and a couple.
Equilibrium conditions for any number of coplanar non-concurrent forces. Laws of friction, equilibrium of a particle on a rough plane, Problems on ladders, rods, spheres and circles.
